Abdelrahman Elsawy

abdelrahman.elsawy1997@gmail.com | LinkedIn | GitHub | Portfolio

Profile

Computer Science student focused on AI engineering, LLM applications, and agent workflows. Hands-on experience with LangGraph, LangChain, RAG, FastAPI, and Pydantic through personal projects. Seeking a working-student or internship role in AI application development.

Education

Technische Universität Dortmund Oct 2022 - 2027 (Expected)

Bachelor of Science (B.Sc.) in Computer Science | Dortmund, Germany

- Relevant topics include algorithms, data structures, probability, linear algebra, statistics, and machine learning.
- Building personal projects in AI agents, retrieval-augmented generation, and persistent conversational memory.
- Expected to complete the B.Sc. in 2027 and planning to continue with a Master's degree.

Selected Projects

Bachelor's Thesis Assistant 2026

Personal project: AI agents & RAG | GitHub

- Built a LangGraph workflow coordinating Planner, Worker, and Critic roles, with human approval gates and SQLite checkpoints for resumable research sessions.
- Implemented PDF text extraction, embedding-based retrieval, and reranking to support cited drafts; used LangChain integrations and Pydantic schemas for structured model responses.
- Connected a FastAPI backend to a web interface with streamed progress and report downloads; published a separate scripted browser demo on GitHub Pages.

Mem0 Customer Memory 2026

Personal project: persistent conversational memory | GitHub

- Built a Streamlit support chat that retrieves customer-specific memories before generating replies and preserves stored facts across new chat sessions.
- Integrated Mem0, local Qdrant, and FastEmbed for memory storage and search, Groq for replies and fact extraction, and SQLite for stable customer IDs.
- Added views of saved and retrieved memories, customer-filtered searches, and memory deletion to explore how persistent context affects replies.

Skills

Programming: Python, SQL

AI Applications: LangChain, LangGraph, RAG, Mem0, Qdrant, FastEmbed

Backend & Interfaces: FastAPI, Pydantic, SQLite, Streamlit

Tools: Git, GitHub, pytest, Jupyter Notebook, VS Code

ML Foundation: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch

Currently Learning: MCP (Model Context Protocol), Docker

Languages: German (B2), English (B2)
